WL WorkLog

STAFF TRAINING MANUAL

WorkLog System

Daily work and task tracking.
A step-by-step guide with screenshots.

Version 1.0 | November 2026 | Users, supervisors and administrators

LOG IT · TRACK IT · REPORT IT

CONTENTS

What is inside this manual

Work through the chapters in order, then keep the quick reference card handy for daily use.

1	System overview	3
2	Getting started: signing in	4
	Resetting your password	5
	Creating your own account	6
	Switching between English and Swahili	7
3	The Dashboard	8
4	Finding your work logs	9
	Search and filters	10
5	Creating a work log	11
	Saving and confirmation	12
6	Viewing a work log	13
	Rejected and No Data logs	14
7	Editing and deleting logs	15
8	Exporting PDF reports	16
9	User management (administrators)	17
	Adding and editing users	18
10	Your profile and password	19
11	Status and permission reference	20
12	Working on a phone	21
13	Troubleshooting and tips	22
	Quick reference card	23

HOW TO USE THIS MANUAL

Follow the chapters in order during your first week. Each chapter opens with the screen you will see and then explains every action in numbered steps.

Once you are comfortable, use **Chapter 11** and the **quick reference** on the last page for day-to-day work.

Reading the callouts

- **Tip** — a faster or safer way to do something.
- **Important** — something to check before you continue.
- **Careful** — an action that cannot be undone.
- **Good to know** — extra context for the screen.

ABOUT THE SCREENSHOTS

The screenshots come from a demonstration copy of WorkLog. Accounts such as **grace@worklog.test** are examples.

Screens show a supervisor or administrator view. Depending on your role, you may see fewer menu items and actions.

CHAPTER 1

System overview

One shared record of the work your team does every day.

WorkLog records what was worked on, who requested it, when it happened and what was done. Everyone logs their own work; supervisors and administrators review the entries, update their status and export reports.

01

Accountability

Every task has an owner, a date, a requester and a written record of the actions taken.

02

Visibility

Submitted, assigned, rejected and No Data statuses show exactly where each piece of work stands.

03

Reporting

Filter the log list and export a clean PDF report for meetings, appraisals or audits.

Who does what

ROLE	WHAT THE ROLE CAN DO
User	Creates and manages their own work logs, follows the review status, and exports their own records.
Supervisor	Sees every team log, sets any status, writes supervisor comments and rejection reasons, and exports team reports.
Administrator	Everything a supervisor can do, plus creating, editing and deleting user accounts.

How a log moves through the system

A standard user always submits a new log as **Submitted**. Supervisors and administrators move it forward.

STEP 1

Submitted

The work has been logged and is waiting for a supervisor to review it.

STEP 2

Assigned

The work is in progress or has been assigned to a team member.

IF INFORMATION IS MISSING

Rejected

The log needs more detail. The reason is shown on the log; correct it and ask for a new review.

IF THE TASK IS ON HOLD

No Data

Information or an approval is still missing. Add the details once they arrive.

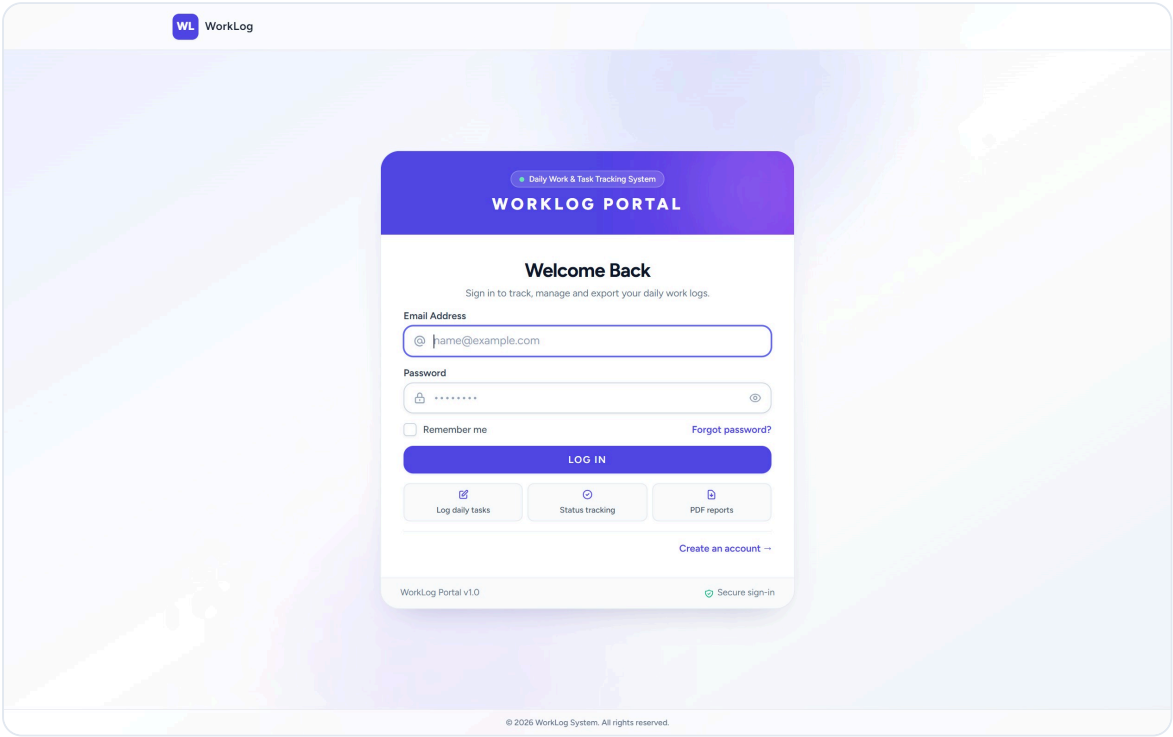

TIP

Log work on the same day it happens. A clear description now is far easier than trying to remember the details at the end of the month.

Signing in

The sign-in screen is the entry point to WorkLog.

Open the WorkLog address provided by your administrator. If you are not signed in, the login screen appears automatically.

The WorkLog Portal sign-in screen.

1. Enter the **email address** used for your WorkLog account.
2. Enter your **password**. Use the eye icon on the right to check what you have typed.
3. Tick **Remember me** only on a computer that only you use. Leave it off on shared machines.
4. Select **Log in**.
5. You arrive on **Daily Work Logs**. Supervisors and administrators also get the **Dashboard** and **Users** menu items.

FIRST TIME HERE?

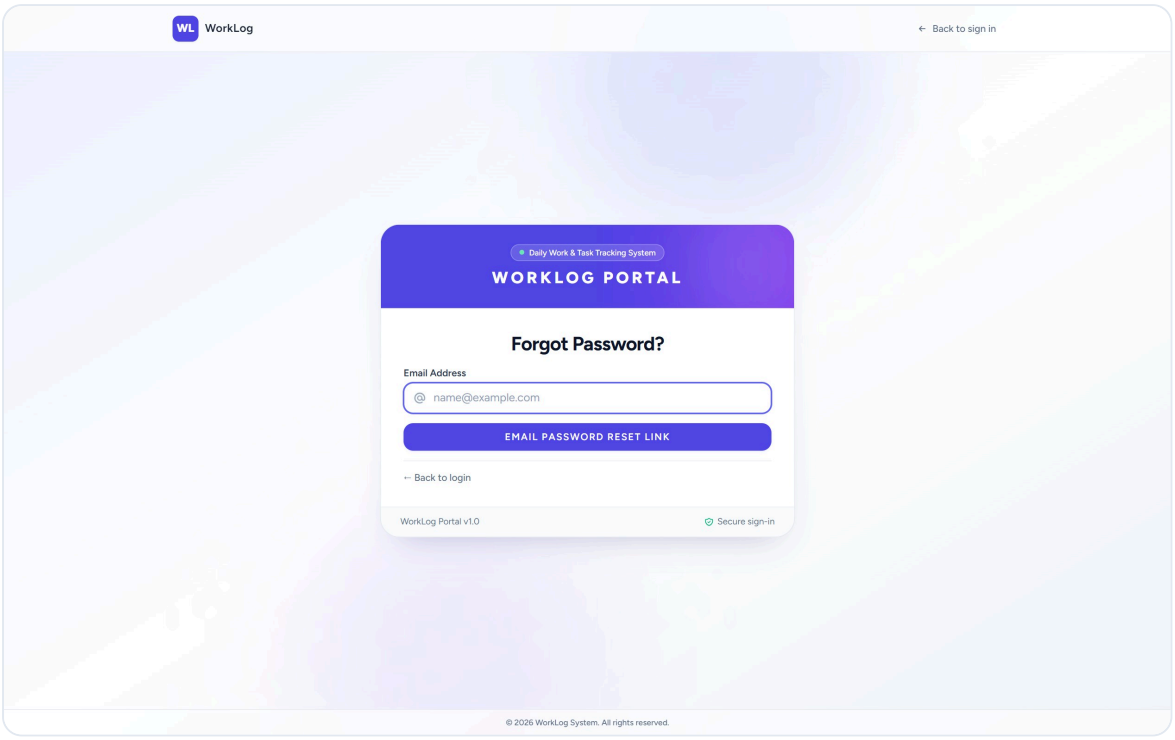

Accounts are usually created by an administrator in **Users → Add user**. If your organisation allows self-registration, select **Create an account** at the bottom of the login screen (page 6). New self-registered accounts receive the standard **User** role; an administrator can upgrade the role later.

IMPORTANT

Never share your password. When you finish on a shared or public computer, open the avatar menu at the top right and choose **Log Out**.

Resetting your password

Use the Forgot password link when you cannot sign in.

Requesting a password reset link.

1. On the login screen, select **Forgot password?**.
2. Enter the email address of your WorkLog account.
3. Select **Email password reset link**.
4. Open the message from WorkLog and select the reset link. The link is time-limited, so use it promptly.
5. Choose a new password and confirm it. Use at least eight characters.
6. Return to the login screen and sign in with the new password.

NO EMAIL ARRIVED?

Check your spam or junk folder first, and confirm that you used the correct address. If the login page shows a notice that email delivery is switched off on this server, no reset message can be sent — contact your administrator, who can set a new password for you from **Users** → **Edit user**.

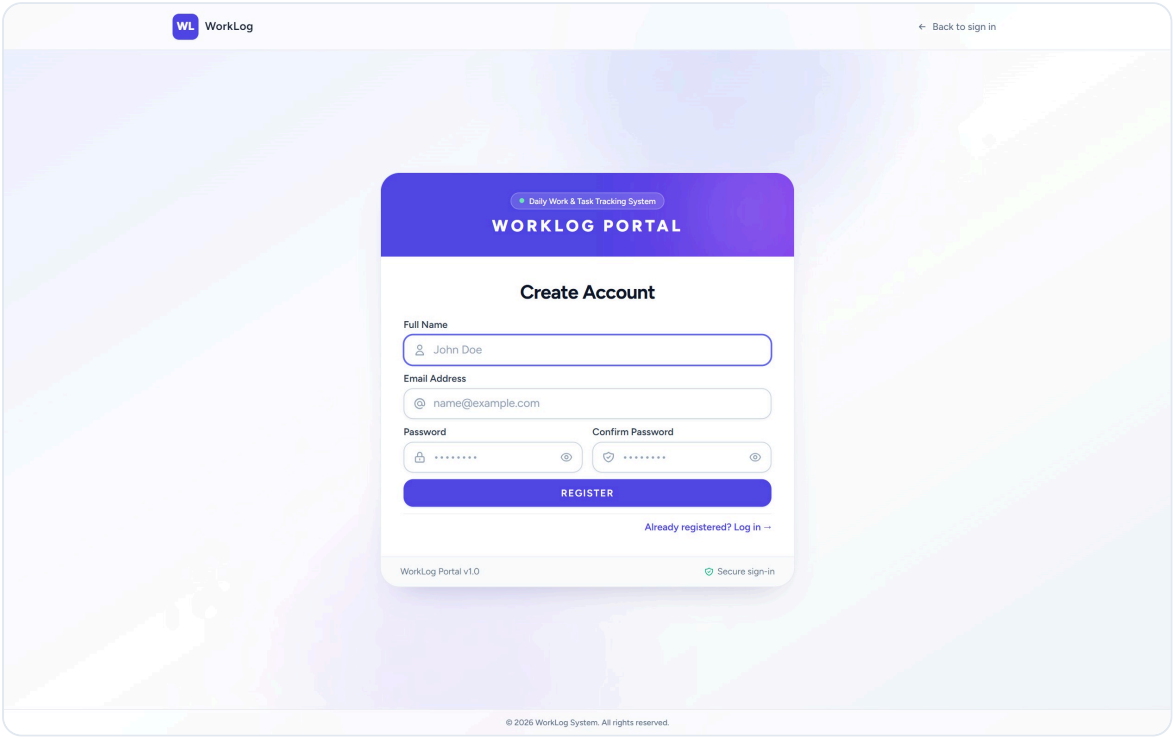

GOOD TO KNOW

After a successful request the screen confirms that the link was sent. For security, the same confirmation is shown even when the address is not registered, so it cannot be used to discover who has an account.

Creating your own account

Register yourself when your organisation allows it.

When the sign-in screen shows **Create an account**, you can register yourself without asking an administrator. The link only appears while self-registration is switched on for your organisation.

The Create Account form, reached from the sign-in screen.

1. On the sign-in screen, select **Create an account**.
2. Enter your **full name** as it should appear on your work logs and reports.
3. Enter the **email address** you will sign in with. It must not already belong to another account.
4. Choose a password of at least eight characters and type it again under **Confirm Password**. The strength bar turns green for a strong password.
5. Select **Register**. You are signed in automatically and arrive on **Daily Work Logs**.

YOUR ROLE AFTER REGISTERING

New accounts always receive the standard **User** role, so you can create and manage your own work logs. If you also review other people's logs or manage accounts, ask an administrator to change your role.

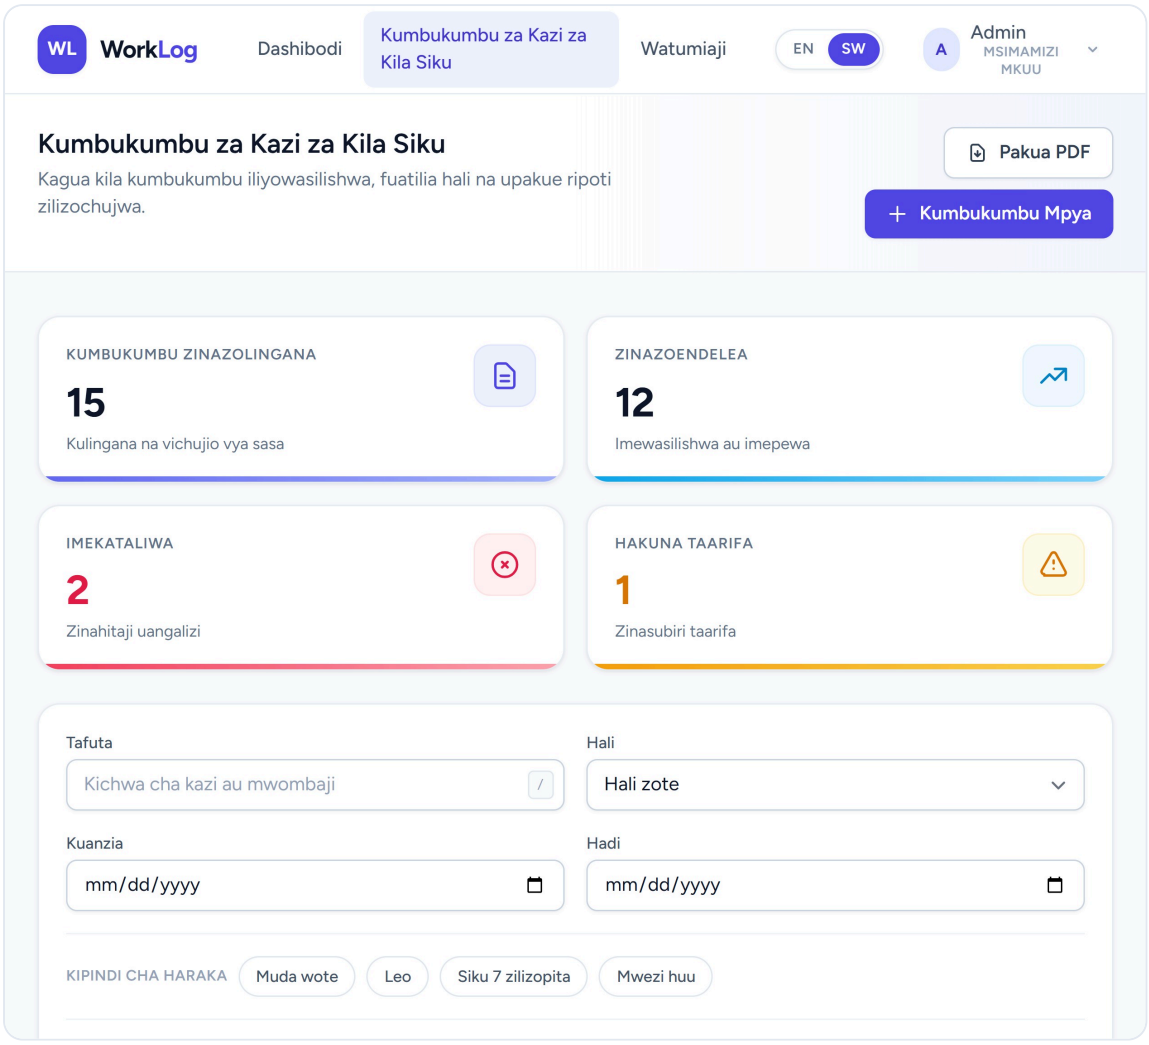

NO CREATE AN ACCOUNT LINK?

Self-registration has been switched off. Ask an administrator to create the account for you from **Users → Add user** (see page 18).

Switching between English and Swahili

Use WorkLog in the language you are most comfortable with.

WorkLog is available in **English** and **Swahili**. English is the default, so every new visitor starts with the screens described in this manual.

The work log list in Swahili. The **SW** button is highlighted, and every label follows the chosen language.

1. Find the **EN | SW** switch at the top of the screen: next to the WorkLog logo on the sign-in and registration screens, or beside your avatar once you are signed in. On a phone it sits inside the menu.
2. Select **SW** for Swahili or **EN** for English. The page reloads in the chosen language.
3. Keep working normally. Your choice is remembered for the rest of the browser session, so it follows you from page to page and survives signing in or out.

WHAT CHANGES WITH THE LANGUAGE

Menus, forms, buttons, statuses, dates, validation messages, confirmation messages and the exported PDF report all follow the selected language. The text your colleagues typed into a log stays exactly as they wrote it.

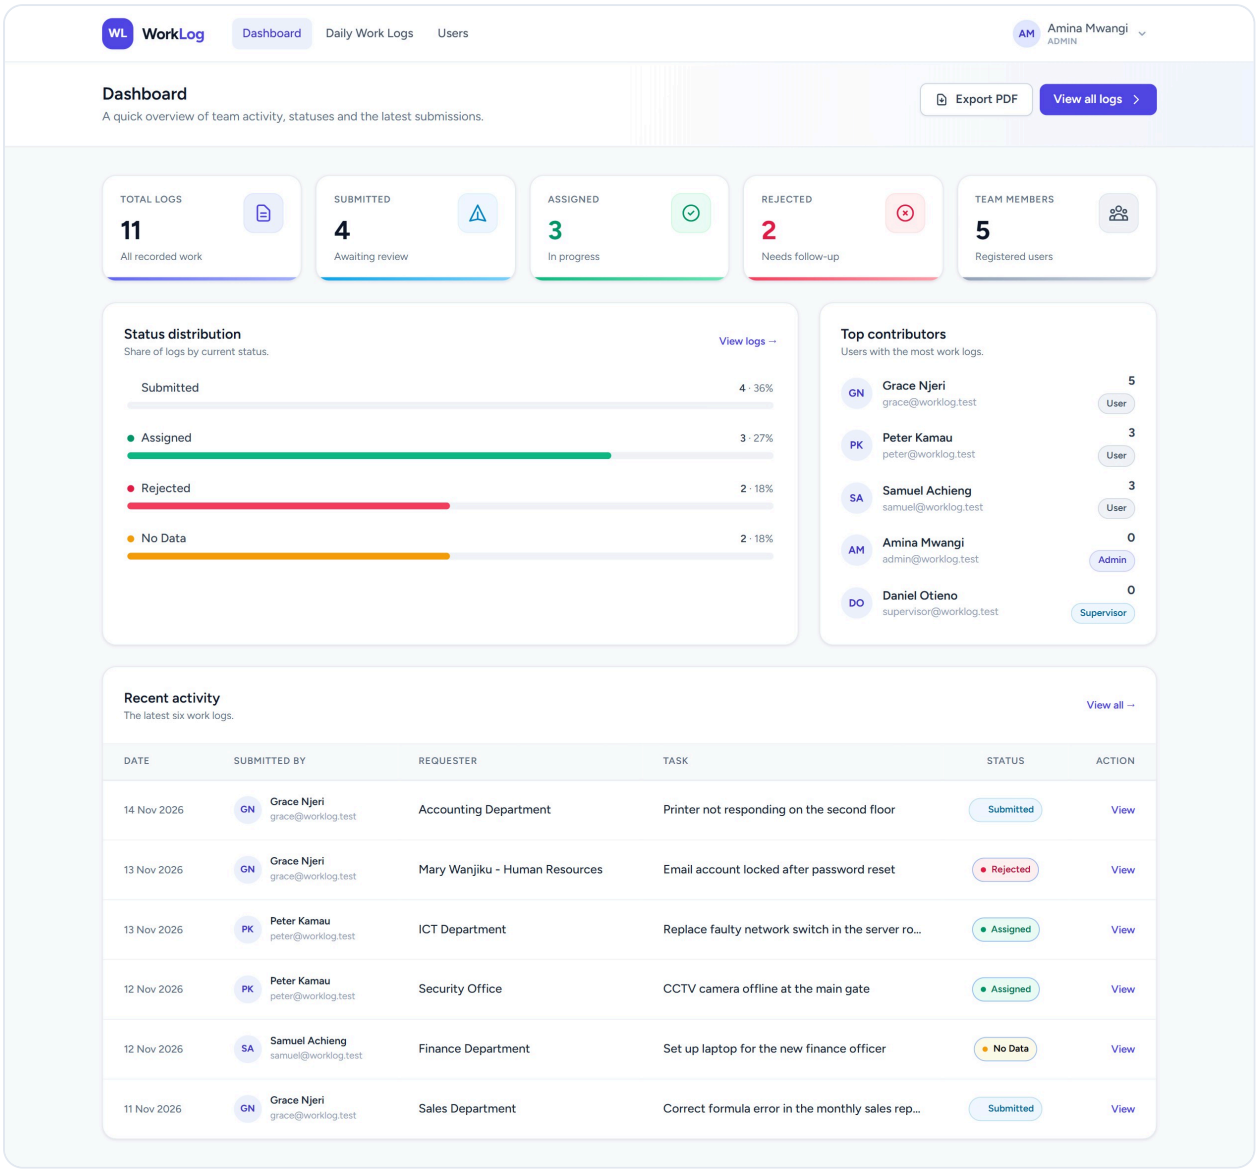

IMPORTANT

The switch changes the interface only — never the data. Closing the browser ends the session, and the next visit starts in English again.

CHAPTER 3

The Dashboard

An organisation-wide snapshot for supervisors and administrators.

The Dashboard, showing team totals, status distribution, top contributors and recent activity.

- **Summary cards** — total logs, submitted, assigned, rejected and registered team members. Select a card to open a matching, pre-filtered list.
- **Status distribution** — the share of logs in each status, with a bar for each one. Select a row to filter the log list.
- **Top contributors** — the people with the most logs, useful for workload balancing.
- **Recent activity** — the six latest logs. Select a task title or **View** to open it.

TIP

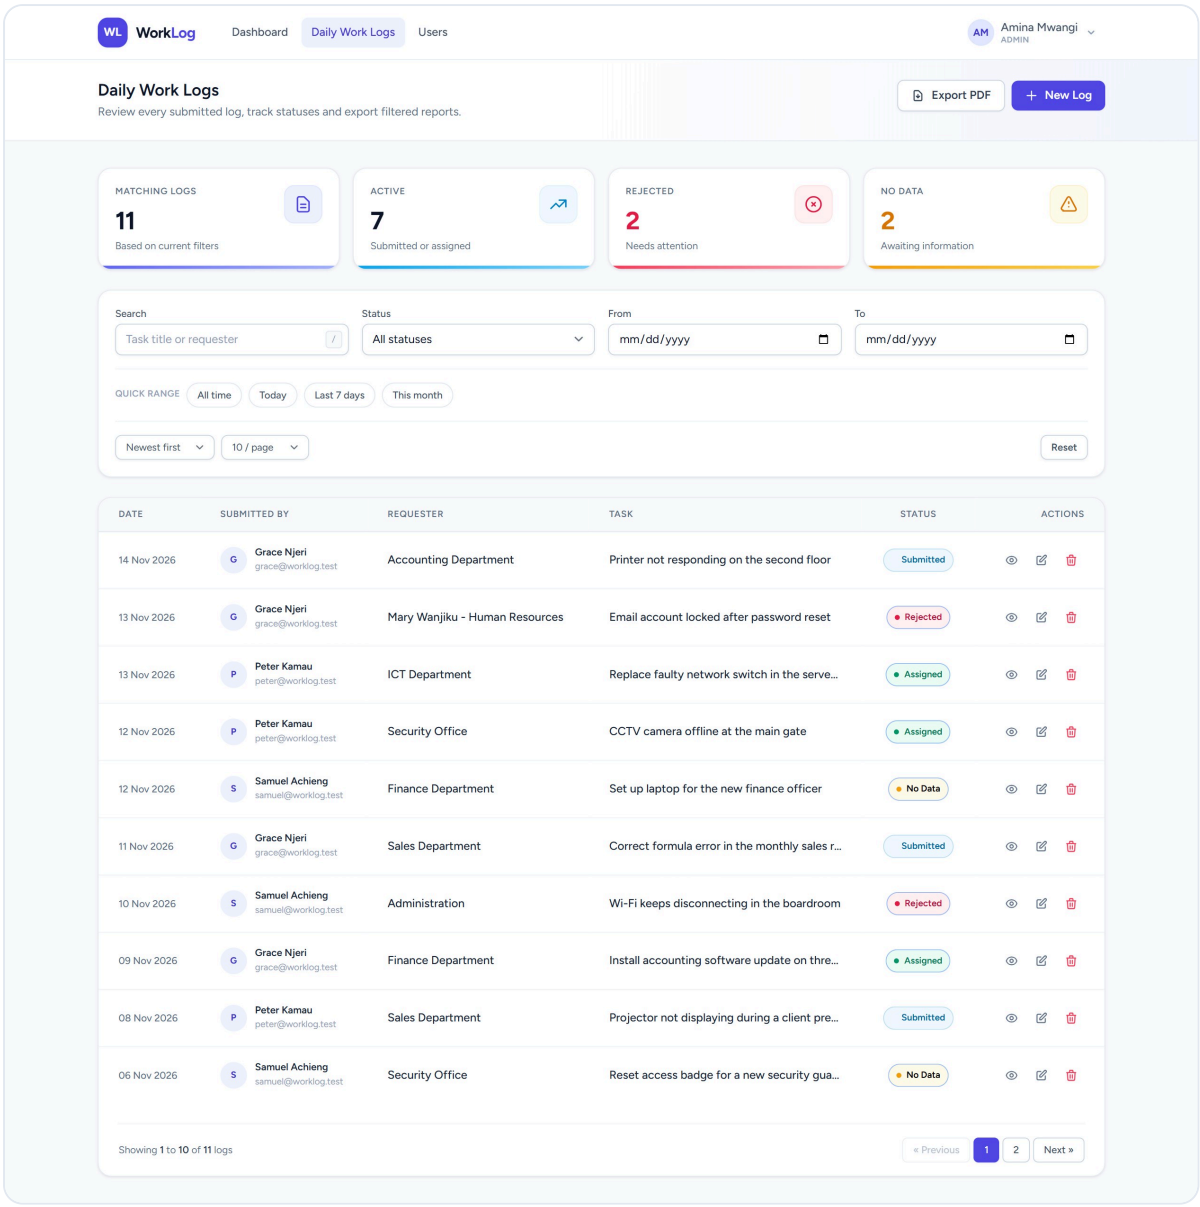

Use the **Dashboard** → **Export PDF** button when you need a quick snapshot for a management meeting. For a report limited to a date range or a single status, start from the log list, apply the filters and export there instead.

IMPORTANT

The Dashboard is only shown to supervisors and administrators. Standard users are taken straight to **Daily Work Logs**, which contains their own summary cards.

The work log list

Every log you can see, with its current status and available actions.

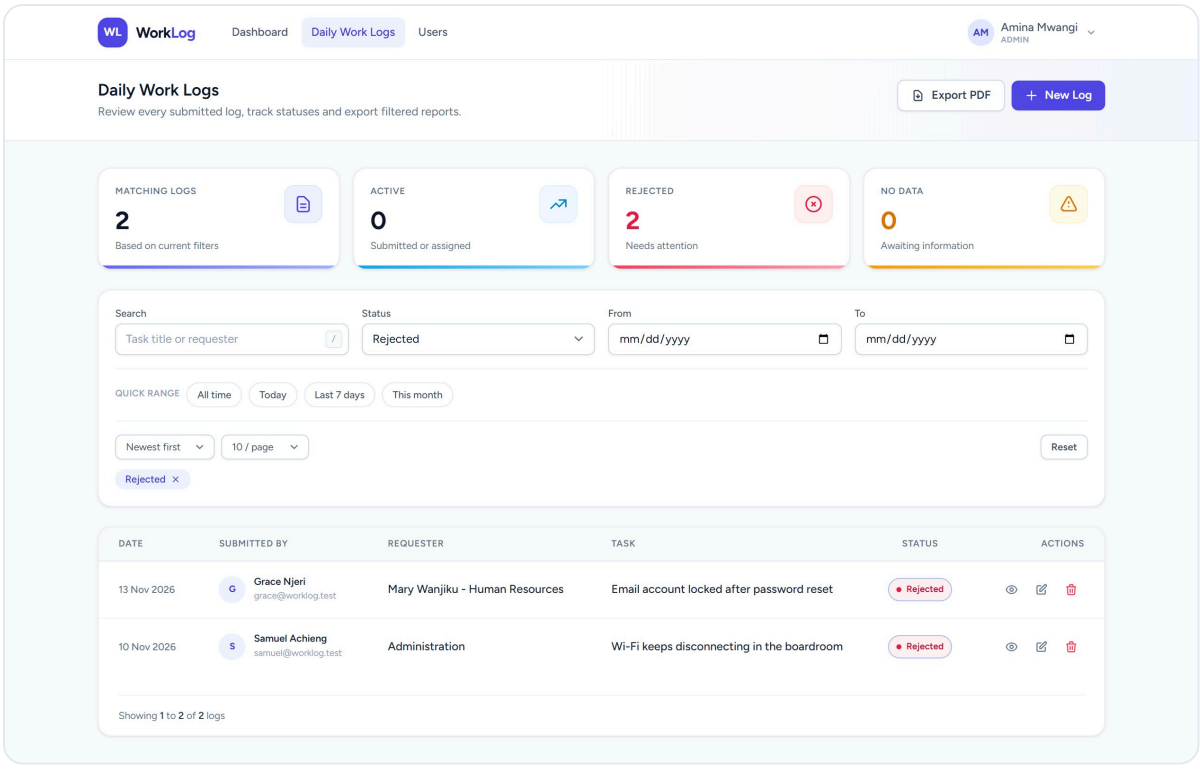

Daily Work Logs as seen by an administrator. A standard user sees only their own logs.

1. **Top menu** — Dashboard (managers), Daily Work Logs and Users (administrators).
2. **Page actions** — Export PDF and the primary **New Log** button.
3. **Summary cards** — matching logs, active, rejected and No Data, based on the current filters.
4. **Search** — task title or requester. Press `/` anywhere on this page to jump to it.
5. **Filters** — status, From date and To date. Filters apply automatically.
6. **Quick range** — All time, Today, Last 7 days or This month in one click.
7. **Sorting** — newest or oldest first, plus 5, 10, 25 or 50 rows per page.
8. **Table columns** — date, submitter (managers only), requester, task, status.
9. **Row actions** — view, edit and delete. Only actions your role allows are shown.
10. **Pagination** — move between pages without losing the current filters.

> **TIP**
> Select a task title to open the full log. The status badge uses the same colours everywhere in the system: blue for submitted, green for assigned, red for rejected and amber for No Data.

Search and filters

Narrow the list down to exactly the records you need.

The list filtered to rejected logs only, with the active filter shown as a removable chip.

1. **Search** by task title or requester name. The list updates as you type.
2. **Choose a status** from the dropdown to see only those logs.
3. **Set From and To dates** to focus on a period, or use a **quick range**.
4. **Remove a filter** by selecting the × on its chip, or start again with **Reset**.
5. **Sort** the results and choose how many rows appear on each page.

TIP

Filters are stored in the page address. You can bookmark a filtered view or share the link with a colleague who has access to the same logs.

GOOD TO KNOW

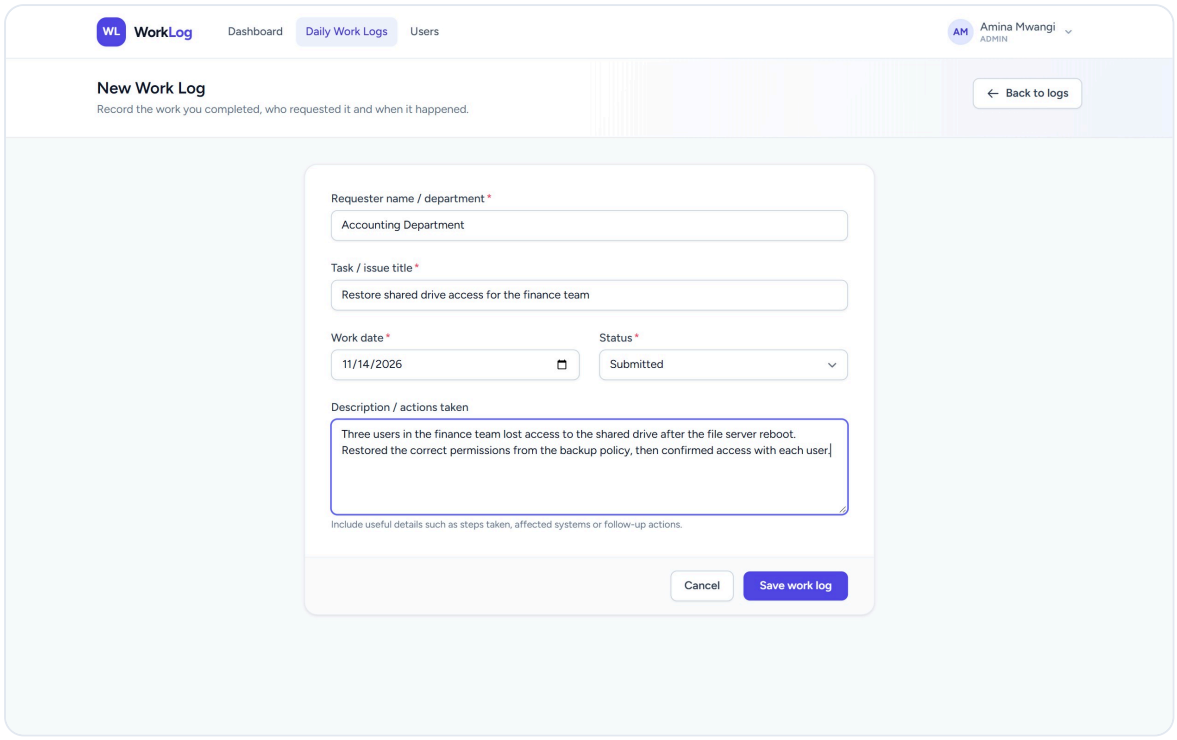

The summary cards always describe the current filter, so **Matching logs**, **Active**, **Rejected** and **No Data** change as you search.

EMPTY LIST?

If no rows appear, the filters are probably too narrow. Select **Reset** to return to all logs.

Completing the form

Record the work while the details are still fresh.

The New Work Log form, completed with a typical entry.

1. Select **New Log** at the top of the Daily Work Logs page.
2. Complete the fields using the guidance in the table below.
3. Select **Save work log**. Nothing is stored until you save.

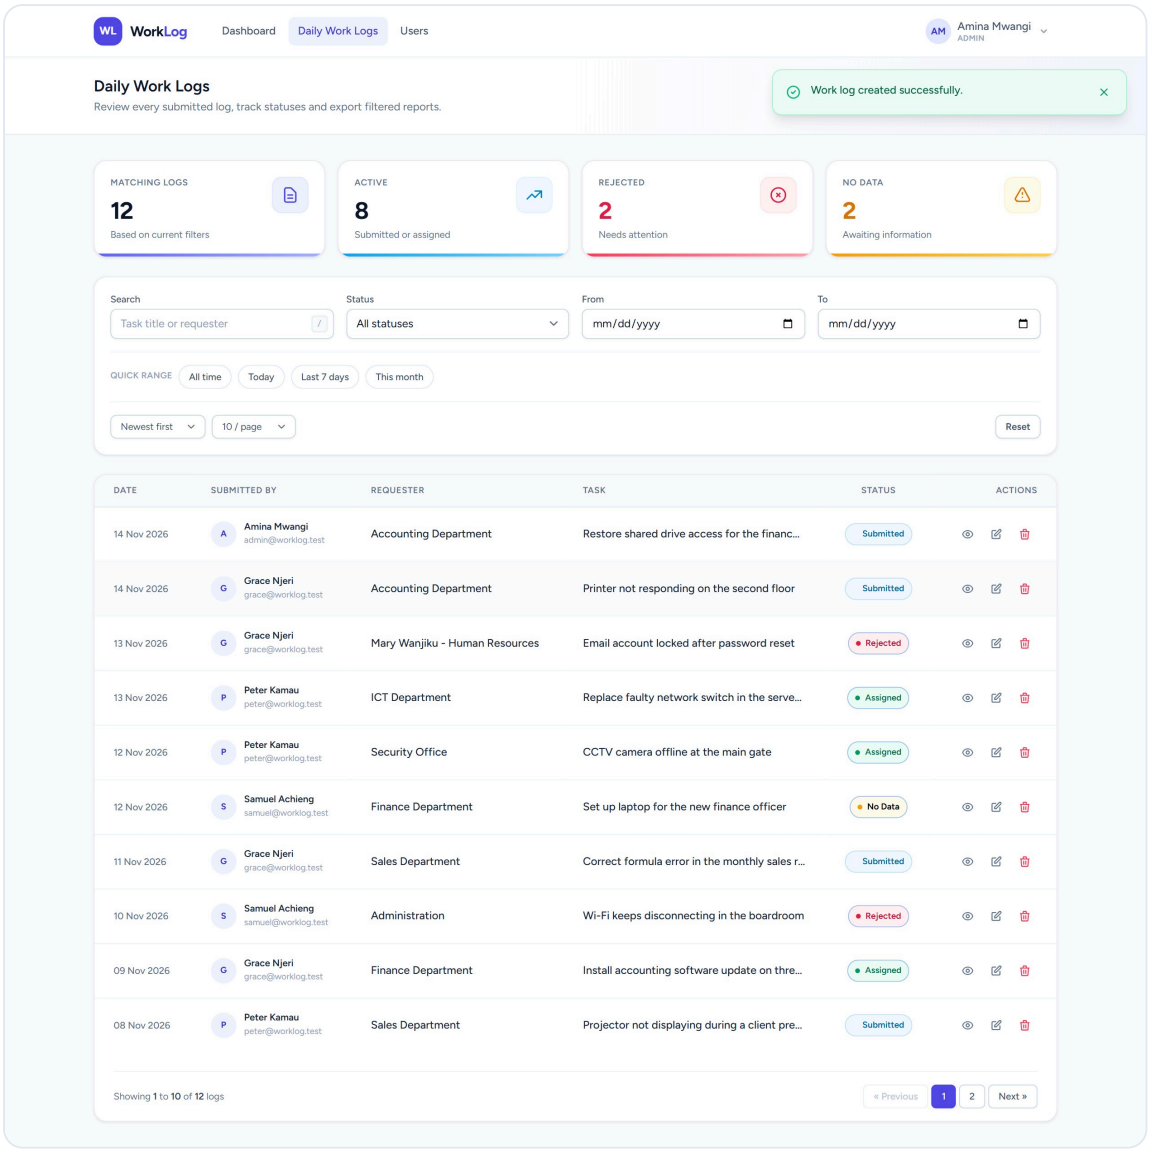

FIELD	REQUIRED	WHAT TO ENTER
Requester name / department	Yes	The person or department that asked for the work, for example *Accounting Department*.
Task / issue title	Yes	A short, specific summary, for example *Restore shared drive access for the finance team*.
Work date	Yes	The date the work happened. It defaults to today.
Status	Managers only	Shown to supervisors and administrators. Standard users do not see this field; their log is saved as Submitted.
Reason for rejection	When Rejected	Appears when a manager selects Rejected. Explain clearly what must be corrected.
Description / actions taken	No	Steps taken, systems affected, the outcome and any follow-up. Write it for someone who was not there.

GOOD TO KNOW

Standard users see an information banner on the form: the log will be saved as **Submitted**. A supervisor or administrator reviews it and updates the status afterwards.

Saving and confirmation

Know that your entry was stored, and what to do if the form is rejected.

After saving, a green confirmation appears and the new entry is added to the top of the list.

1. Select **Save work log** at the bottom of the form.
2. Wait for the button to finish saving. You return to **Daily Work Logs**.
3. Confirm the green **Work log created successfully** message.
4. Check that the new row appears with the correct date, requester and status.

VALIDATION MESSAGES

If a required field is empty or a date is invalid, the form returns with the field outlined in red and a message underneath. Correct the field and save again. Your other entries are kept.

IMPORTANT

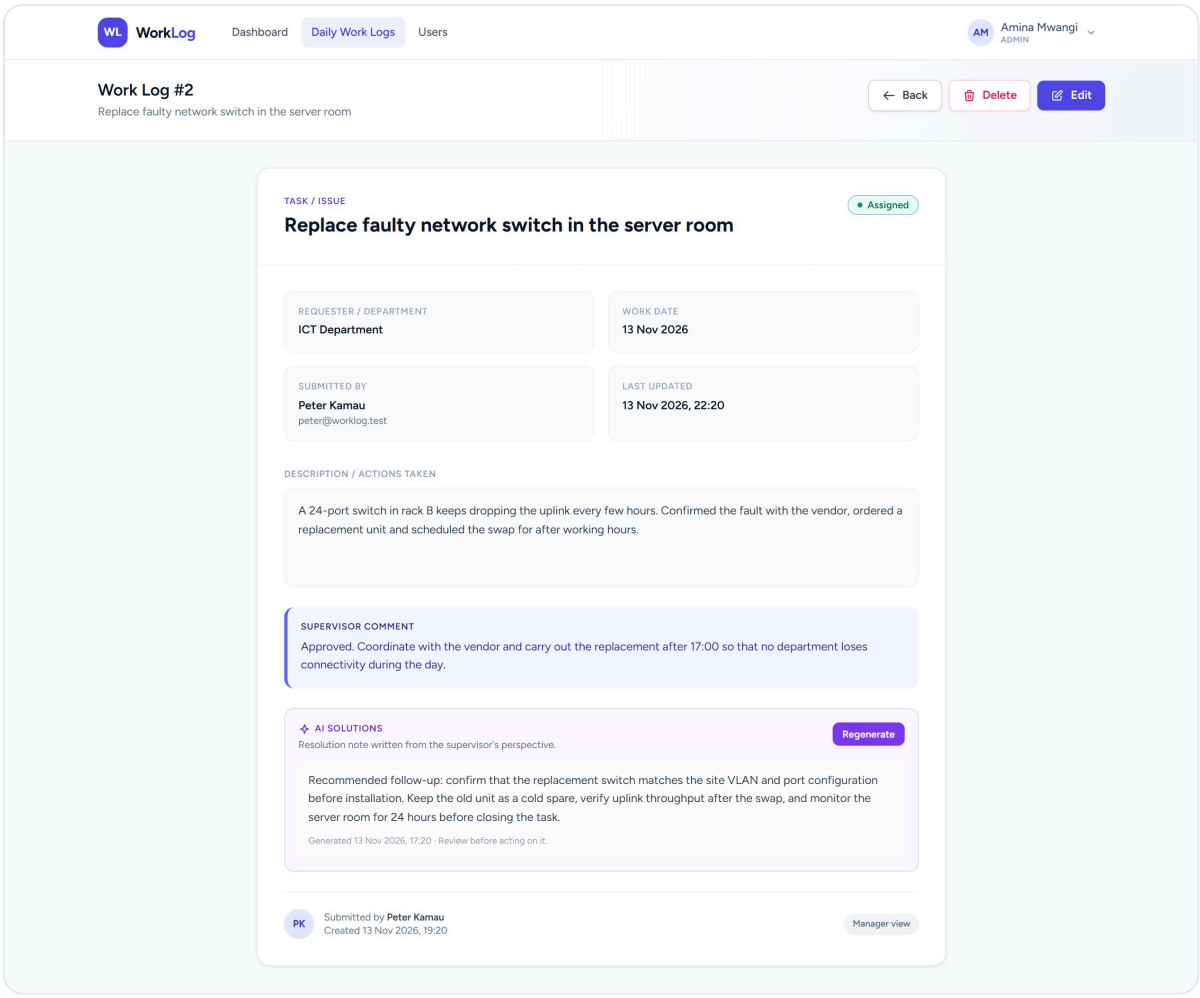

Choosing **Cancel** leaves the form without saving anything. Use the **Back to logs** button only when you really want to abandon the entry.

WHAT HAPPENS NEXT

A submitted log is immediately visible to supervisors and administrators. They can assign it, add a comment or return it for more detail; follow the status from the list at any time.

Reading a log

The full history and context of a single piece of work.

A work log in Assigned status, with a supervisor comment and an AI-generated resolution note.

- **Title and status** — the task summary and its current badge.
- **Requester / department** — who asked for the work.
- **Work date** — when the work happened, not when it was typed.
- **Submitted by** — the owner of the log, with their email address.
- **Last updated** — the last change to the record.
- **Description** — the actions taken, shown exactly as written.
- **Supervisor comment** — review notes from the manager.
- **AI solutions** — an optional draft note; see the note below.

ABOUT AI SOLUTIONS

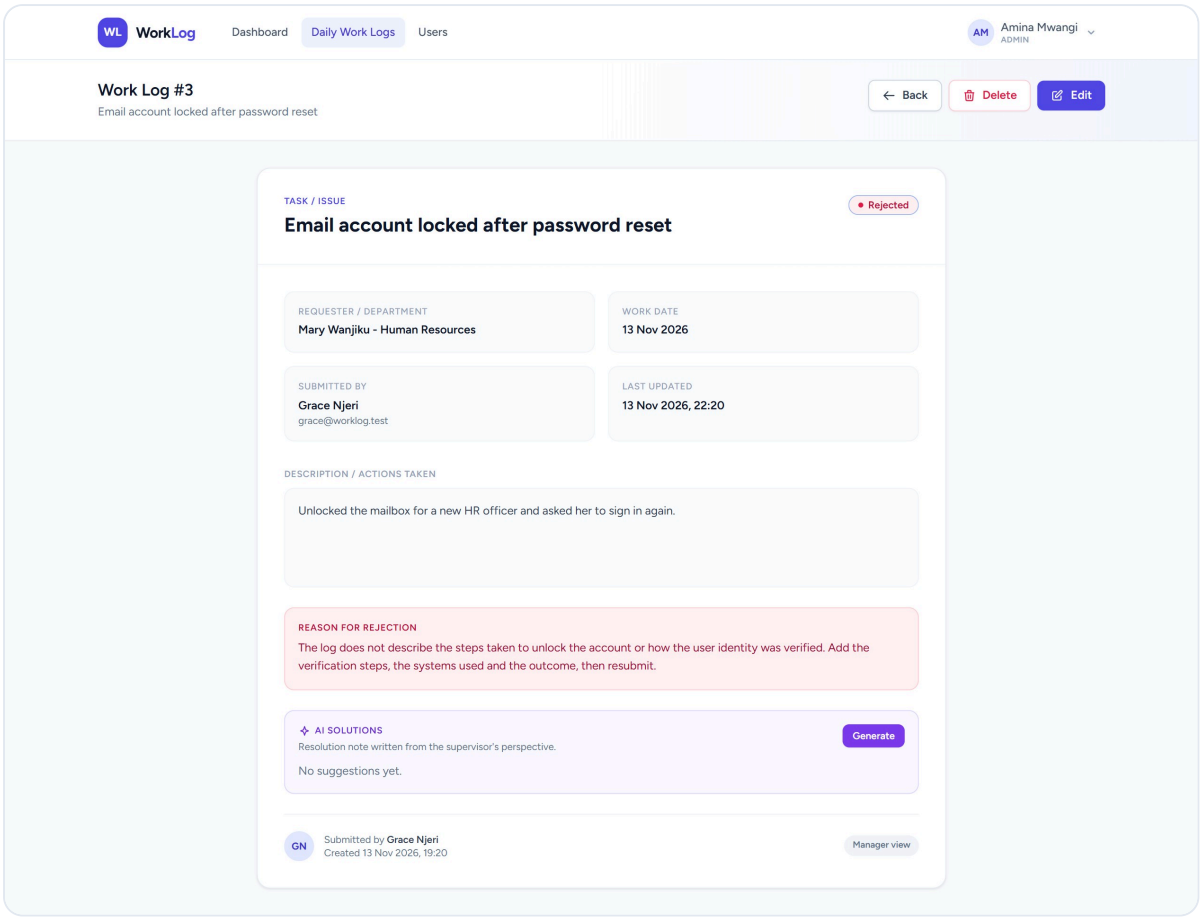

Where the AI service is configured, **Generate** creates a draft resolution note written from the supervisor's perspective. It is a suggestion only: review it before acting, and use **Regenerate** if you want another version. If the service is not configured, a message explains that an administrator must add the key; the rest of WorkLog continues to work normally.

TIP

Supervisors and administrators see a **Manager view** badge at the bottom of the page. The **Edit** and **Delete** buttons appear only when your role allows that action.

Rejected and No Data logs

A status is a message: here is how to respond to it.

A rejected log. The reason for rejection is shown in a red panel just below the description.

If your log is rejected

1. Read the **Reason for rejection** carefully.
2. Select **Edit** and add the missing information.
3. Save the changes with **Update work log**.
4. Ask a supervisor or administrator to review the log again and update the status.

If your log has No Data

No Data means the record is incomplete or the task is on hold — for example, a signed approval or a software list is still missing. Add the information when it arrives, then ask for a new review.

REMEMBER

Rejection does not delete the log. It stays in the history so the correction can be followed up.

IMPORTANT

Standard users cannot change a log back to Submitted from Rejected or No Data, and cannot set those statuses themselves. Supervisors and administrators control the review statuses.

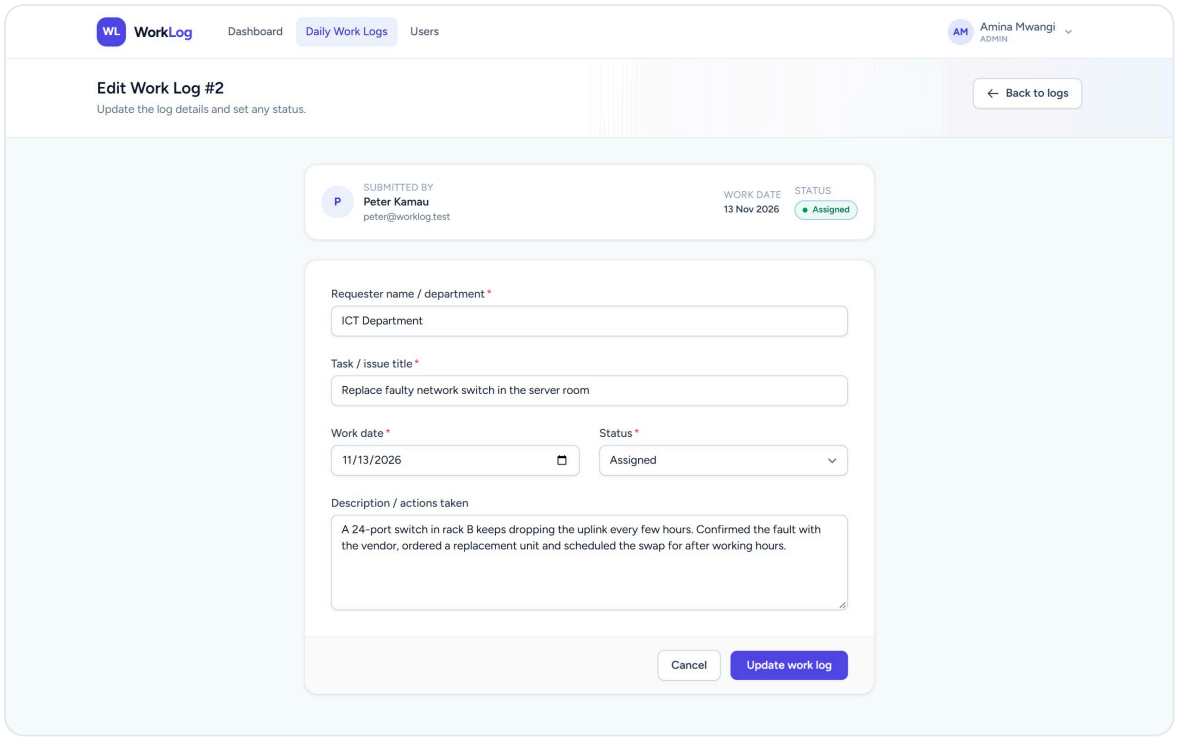

TIP

When you correct a rejected log, add what the reviewer asked for in the description — for example the verification steps, the systems used, or the diagnostic results. That avoids a second rejection.

CHAPTER 7

Editing and deleting logs

Keep records accurate — and know what cannot be undone.

Editing a log. The submitter, work date and current status stay visible at the top of the form.

Who can edit or delete a log

ROLE	EDIT	DELETE	STATUSES THEY CAN SET
User	Own logs, while the status is Submitted or Assigned	Own logs, while the status is Submitted	Submitted or Assigned
Supervisor	Any log	Any log	Any status
Administrator	Any log	Any log	Any status

To edit a log

1. Open the log from the list.
2. Select **Edit**.
3. Change the fields and select **Update work log**.

Managers who choose **Rejected** must complete the reason field that appears.

To delete a log

1. Open the log and select **Delete**.
2. Read the confirmation dialog.
3. Select **Delete log** to confirm.

> **CAREFUL**
> Deleting is permanent and cannot be undone. Only delete a log when it was created by mistake.

> **MISSING BUTTONS?**
> If Edit or Delete is not shown, the rules in the table above do not allow that action for this log. Ask a supervisor or administrator for help.

CHAPTER 8

Exporting PDF reports

Turn the filtered log list into a document you can share.

DAILY WORK LOG REPORT

Official Performance & Task Record Summary

Generated by: Amina Mwangi — **Generated:** 14 Nov, 2026 11:01

Email: admin@worklog.test — **Total Logs:** 12

Filters: From: 01/11/2026 | To: 30/11/2026

#	DATE	SUBMITTED BY	REQUESTER	TASK TITLE	STATUS
1	14/11/2026	Amina Mwangi admin@worklog.test	Accounting Department	Restore shared drive access for the finance team	SUBMITTED
2	14/11/2026	Grace Njeri grace@worklog.test	Accounting Department	Printer not responding on the second floor	SUBMITTED
3	13/11/2026	Grace Njeri grace@worklog.test	Mary Wanjiku - Human Resources	Email account locked after password reset	REJECTED *The log does not describe the steps taken to unlock the account or how the user identity was verified. Add the verification steps, the systems used and the outcome, then resubmit.*
4	13/11/2026	Peter Kamau peter@worklog.test	ICT Department	Replace faulty network switch in the server room	ASSIGNED
5	12/11/2026	Peter Kamau peter@worklog.test	Security Office	CCTV camera offline at the main gate	ASSIGNED
6	12/11/2026	Samuel Achieng samuel@worklog.test	Finance Department	Set up laptop for the new finance officer	NO DATA
7	11/11/2026	Grace Njeri grace@worklog.test	Sales Department	Correct formula error in the monthly sales report	SUBMITTED
8	10/11/2026	Samuel Achieng samuel@worklog.test	Administration	Wi-Fi keeps disconnecting in the boardroom	REJECTED *A similar issue was logged last week. Attach the diagnostic results from the access point and confirm whether the problem affects all devices before resubmitting.*
9	09/11/2026	Grace Njeri grace@worklog.test	Finance Department	Install accounting software update on three workstations	ASSIGNED
10	08/11/2026	Peter Kamau peter@worklog.test	Sales Department	Projector not displaying during a client presentation	SUBMITTED
11	06/11/2026	Samuel Achieng samuel@worklog.test	Security Office	Reset access badge for a new security guard	NO DATA
12	04/11/2026	Grace Njeri grace@worklog.test	Procurement	Recover files from a corrupted USB drive	SUBMITTED

The report uses the same filters as the list on screen, so what you see is what you export.

1. Open **Daily Work Logs** or the **Dashboard**.
2. Apply the search, status and date filters you need.
3. Select **Export PDF**.
4. The report opens in a new browser tab and downloads as **work-log-report-YYYY-MM-DD.pdf**.
5. Save or print the file and share it as required.

What the report contains

- A header with who generated it, the date, the total number of logs and the active filters.
- One row per matching log: date, requester, task and status.
- Submitted-by details for supervisor and administrator exports.
- The reason for rejection, printed under rejected statuses.

CAREFUL

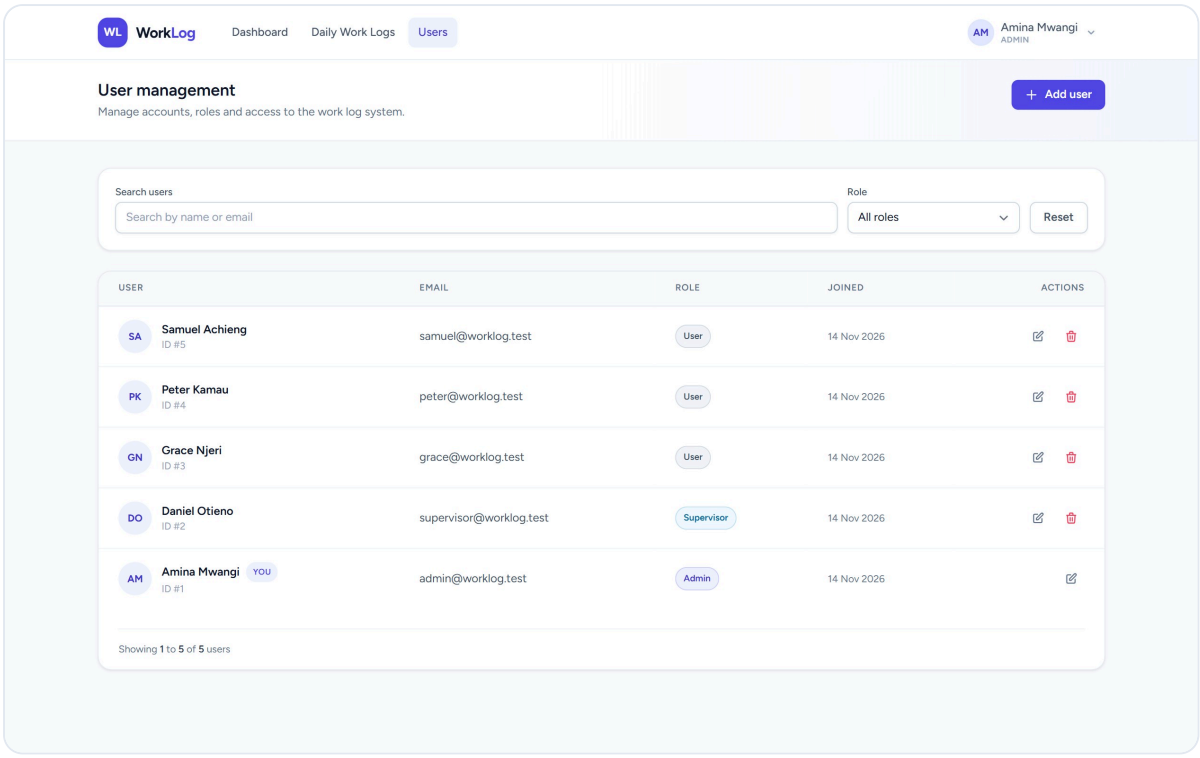

Standard users export only their own logs. Always check the active filters before sharing a report.

TIP

A useful monthly routine: choose **This month**, set the status to **Rejected** or **No Data**, and export the list to see everything that still needs follow-up.

The user list

Administrators manage accounts, roles and access from one place.

User management, available from the **Users** menu item for administrators only.

- **Search users** by name or email address.
- **Filter by role** — Admin, Supervisor or User.
- **Joined** shows when each account was created.
- **You** marks your own account. You cannot delete yourself.
- **Edit** opens the account details, role and password.
- **Delete** removes the account and its work logs after confirmation.
- **Add user** creates a new account.
- Use **Reset** to clear the search and role filter.

Choosing the right role

User

Creates and manages their own logs. The right role for most staff.

Supervisor

Reviews all logs and updates statuses or rejection reasons. No user management.

Administrator

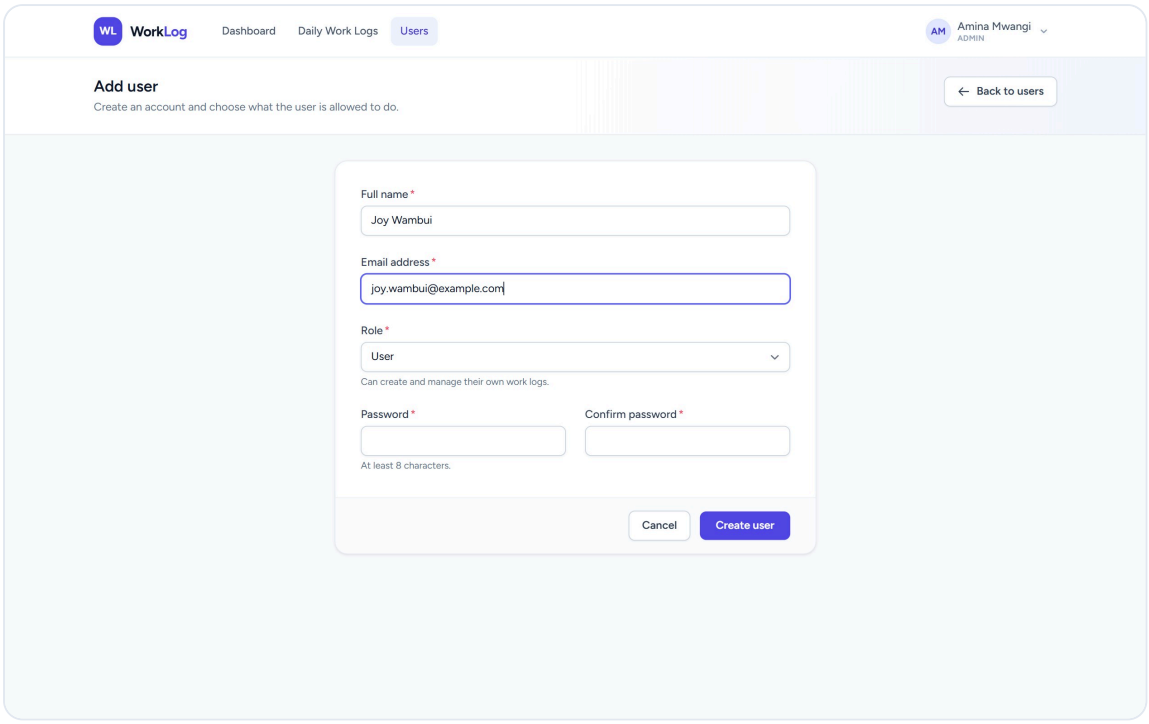

Full access, including user management. Keep this role limited to a small number of people.

IMPORTANT

The **Users** menu item and this page are visible to administrators only. Supervisors can manage logs but not accounts.

Adding and editing users

Create an account, choose its role and set a first password.

The Add user form. The role hint below the selector explains what the chosen role can do.

To add a user

1. Open **Users** and select **Add user**.
2. Enter the full name and a unique email address.
3. Choose the role: User, Supervisor or Administrator.
4. Set a password of at least eight characters and confirm it.
5. Select **Create user** and share the credentials securely.

To edit a user

1. Select the pencil icon next to the account.
2. Change the name, email or role as needed.
3. Leave the password fields blank to keep the current password, or enter and confirm a new one.
4. Select **Save changes**.

BUILT-IN SAFEGUARDS

You cannot remove your own administrator role, and the system always keeps at least one administrator. Emails must be unique, and new passwords must be at least eight characters.

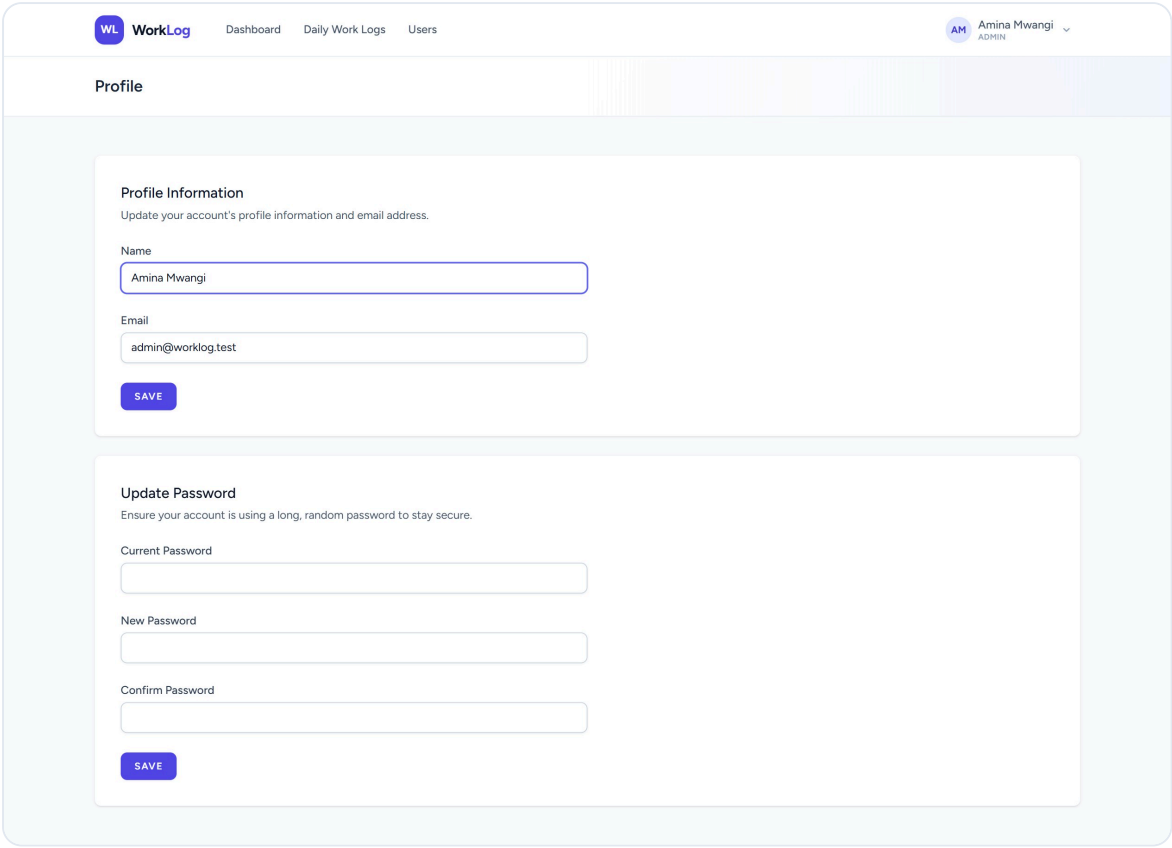

CAREFUL

Deleting a user permanently removes that account **and all of their work logs**. You cannot delete your own account. Confirm with the person and their supervisor before deleting anything.

CHAPTER 10

Your profile and password

Keep your name and sign-in details up to date.

The Profile page, reached from the avatar menu at the top right.

Update your details

1. Open the avatar menu and select **Profile**.
2. Change your **Name** or **Email**.
3. Select **Save** under Profile Information.

Your name appears on every log you submit and in reports. Your email is your sign-in address.

Change your password

1. In the **Update Password** section, enter your current password.
2. Enter a new password and confirm it.
3. Select **Save** under Update Password.

Use a long, unique password and never reuse your email password.

IMPORTANT

If you change your email address, use the new address the next time you sign in. Tell your administrator if your name changes so reports and user lists stay accurate.

TIP

Forgot your current password? Sign out, use **Forgot password?** on the login screen, or ask an administrator to set a new one from User management.

CHAPTER 11

Status and permission reference

The four statuses, and who is allowed to do what.

The four statuses

STATUS	WHAT IT MEANS	WHO SETS IT	WHAT TO DO
Submitted	A new log that is waiting for review.	Automatic for user submissions; managers may choose it.	Wait for a supervisor to review it.
Assigned	The work is in progress or assigned to someone.	Supervisors and administrators.	Continue the work and keep the description current.
Rejected	The log needs correction or more detail.	Supervisors and administrators, with a required reason.	Read the reason, edit the log and ask for a new review.
No Data	Information or an approval is still missing.	Supervisors and administrators.	Add the missing details when they arrive.

Permission matrix

ACTION	USER	SUPERVISOR	ADMINISTRATOR
See work logs	Own only	All	All
Create a work log	Yes	Yes	Yes
Edit a log	Own, when Submitted or Assigned	Any log	Any log
Delete a log	Own, when Submitted	Any log	Any log
Change the status	Submitted or Assigned on own logs	Any status	Any status
Write a rejection reason	No	Yes	Yes
View the Dashboard	No	Yes	Yes
Export PDF reports	Own logs	All logs	All logs
Manage user accounts	No	No	Yes

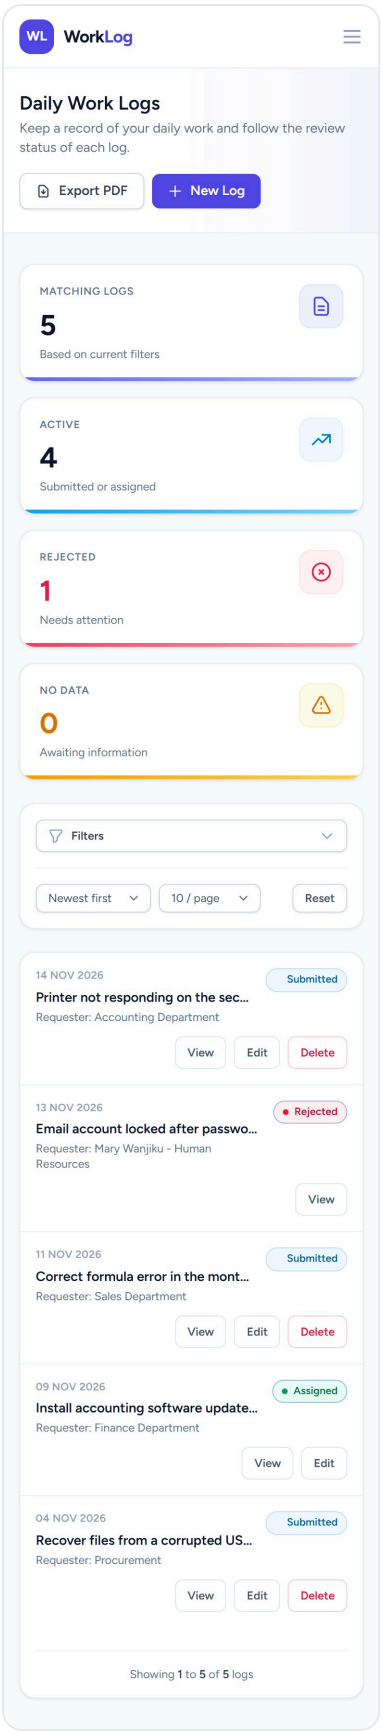

IMPORTANT

A standard user cannot set Rejected or No Data on any log, even their own. Those statuses belong to the review process and are controlled by supervisors and administrators.

CHAPTER 12

Working on a phone

The same system, adjusted for a small screen.

The log list on a phone.

Open the same WorkLog address in your phone's browser and sign in as usual. The layout adapts automatically; your account, permissions and data are identical.

What changes on a small screen

- The top menu collapses into a **hamburger button**, which opens the same pages.
- Summary cards stack vertically instead of sitting side by side.
- A **Filters** button expands the search, status and date controls.
- Each log becomes a card showing the date, task, requester and status, with **View**, **Edit** and **Delete** buttons.
- Tables become card lists, so nothing is cut off or squeezed.

Good habits on mobile

1. Log the work in the same place you would on a computer: **Daily Work Logs** → **New Log**.
2. Use the filter button to find a specific date or status quickly.
3. Rotate to landscape for long descriptions if typing is easier.
4. Sign out from the hamburger menu when using someone else's phone.

> **TIP**
> Bookmark the sign-in page on your phone so you can reach WorkLog in one tap.

CHAPTER 13

Troubleshooting and tips

Quick answers to the most common situations.

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
"Your session expired. Please try again."	The security session timed out, often after leaving the page open for a long time.	Sign in again. The system returns you to the page you were using.
No password reset email	Email delivery may be switched off, or the address may be wrong.	Check spam and the address; if the screen shows an email-off notice, ask an administrator to set a new password.
"These credentials do not match our records."	The email or password is incorrect.	Check the email, turn off Caps Lock and try again, or use **Forgot password?**.
Edit or Delete is missing	Your role or the log status does not allow that action.	Check the table in Chapter 7; ask a supervisor if a change is needed.
The form will not save	A required field is empty or invalid.	Look for the red outline and message, correct the field and save again.
The list is empty	The filters exclude every log.	Select **Reset** or remove the active filter chips.
AI solutions are not configured	The administrator has not added the AI service key.	Ask your administrator. Everything else in WorkLog works without it.
The PDF export failed	The report could not be generated at that moment.	Try again with fewer filters; if it keeps failing, tell your administrator.

FIVE HABITS THAT MAKE WORKLOG WORK WELL

1. Log work the same day. **2.** Write descriptions for someone who was not there. **3.** Check the status before closing a task. **4.** Use filters before exporting. **5.** Press `/` on the log list to search instantly.

STILL STUCK?

Contact your system administrator with the log number (for example **Work Log #42**), the action you were trying to take and, if possible, a screenshot of the message.

KEEP THIS PAGE

Quick reference card

The everyday actions, the four statuses and who to call for help.

Log a piece of work

1. Open **Daily Work Logs**.
2. Select **New Log**.
3. Enter the requester, title and work date.
4. Describe the actions taken and the outcome.
5. Select **Save work log**.

Review and update a status

1. Open the log from the list.
2. Select **Edit**.
3. Choose the new status (Rejected needs a reason).
4. Select **Update work log**.

Find and export records

1. Search by task or requester, or use the filters.
2. Use a quick range such as **This month**.
3. Select **Export PDF**.
4. The report opens in a new tab and downloads.

Manage people (administrators)

1. Open **Users**.
2. Select **Add user** and choose a role.
3. Set a password of at least eight characters.
4. Use the pencil icon to edit, or the bin to delete.

Status at a glance

Submitted
Logged and waiting for review.

Assigned
In progress or assigned.

Rejected
Needs correction; read the reason.

No Data
Information still missing.

Help and support

System administrator: _____ Email / phone: _____
IT helpdesk: _____ WorkLog address: _____

SECURITY REMINDER

Use a unique password, never share your account, and sign out from the avatar menu when you finish on a shared device.

WorkLog System · Training Manual · Version 1.0 · November 2026
